

IssueSpec — A Five-Stage Framework for Structured Review-to-Issue Translation

Raw app reviews → typed, developer-routable issue specifications → aligned, compliant developer responses

HUMAN-IN-THE-LOOP CHECKPOINTS

WORKED EXAMPLE — one review through the five stages

Legend

- Typed intermediate passed between stages (information-extraction cascade)
- Human-in-the-loop checkpoint at high-uncertainty junctures (selective prediction)
- - -→ Feedback loop: corrections propagate backward to retrain upstream stages

Green chips = headline result per stage, traceable to a paper table.

Released artifacts: V1-V5 classifiers, 5,230 verified anchor, 490 gold, SpecCov scorer, 100-cluster benchmark, CMDP-RLHF testbed, 4-LLM replication.
